

Aditi Verma

AI Product Manager · LLM-Powered Feature Shipping · Specs & Execution · High-Agency Builder

✉ aditivermauk@gmail.com | ☎ +91-8279524227 | 📍 Dehradun, India(open to relocation) | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

Summary

AI PM who has shipped LLM-powered products in production — not theory — with hands-on Gemini API integration, end-to-end feature ownership from spec to live deployment, and 5 independently built products. Brings EY consulting experience (BRDs, stakeholder management, Agile) and the technical fluency to work shoulder-to-shoulder with engineering.

Skills

AI / LLM Product: Production Gemini LLM integration (prompt → API call → structured output); multi-agent AI orchestration (CrewAI); LLM vision pipeline design; AI feature scoping & evaluation; prototyping with Claude, Lovable, Replit, Emergent

Specs & Execution: Functional specification writing (BRD / FSD); requirements gathering; user story & acceptance criteria authoring; end-to-end feature ownership from idea to live product; API contracts & cross-team documentation

Product Thinking: User journey design · Feature prioritization · Root-cause debugging · Hypothesis-driven experimentation · Competitive & market analysis · A/B & metric-driven decision making · Figma (wireframes, user flows)

Technical Fluency: JavaScript · Python · SQL · REST APIs · React.js · Node.js · MongoDB · Socket.io · JWT / RBAC · Vercel · Streamlit Cloud

Data & Feedback Iteration: Python / Pandas (usage data & trend analysis) · Excel (benchmarking, pivot analysis) · Plotly / Streamlit dashboards · Conversion funnel thinking · Feedback-to-roadmap loops

Process: Jira · Agile / Scrum · Cross-functional stakeholder management · Product roadmap contribution

Professional Experience

AI Business Analyst Intern — Insurance Domain Technology Consulting

May 2026 – Jul 2026

EY (Ernst & Young Services Pvt. Ltd.) [\[Live\]](#)

- **Shipped an LLM-powered product in production:** designed and integrated a 3-agent Google Gemini pipeline (Business Analyst agent → Product Designer agent → Compliance QA agent) into the Betacare Insurance Portal — took the feature from prompt design to live, deployed tool, compressing a 15-minute manual broker workflow to **under 5 seconds**.
- **Solved a hard production constraint end-to-end:** identified Vercel's 10-second serverless timeout as a blocking issue; independently scoped, spec'ed, and shipped a Dual-Mode Execution Engine (Python CrewAI subprocess in dev / Node.js Gemini proxy in production), delivering AI responses in **under 2 seconds** without changing the user-facing spec.
- **Wrote functional specifications** clear enough to bridge business and engineering: authored BRDs, FSDs, user stories, and acceptance criteria translating ambiguous insurance workflows into testable, developer-ready requirements across 3 stakeholder groups.
- Managed Agile/Jira backlog end-to-end and conducted **competitive benchmarking and market analysis** using Excel for client-facing strategic recommendations to senior leadership.

Product Management Case Studies

Duolingo — Increasing 7-Day Retention for New Users

[\[Case Study\]](#) *Diagnostic / Metrics-Driven*

- Diagnosed drop-off via 3 competing hypotheses; designed “Anchor Moments” habit-formation onboarding targeting 3–5pp 7-day retention lift; defined guardrail metrics (Day 14/30 retention, notification opt-out) to prevent metric gaming; sequenced MVP-first low-cost interventions before scaling engineering investment.

MakeMyTrip — First-Time Flyer Experience for Tier-2/3 India

[\[Case Study\]](#) *0-to-1 / Market Opportunity*

- Identified underserved segment (first-time Tier-2/3 domestic flyers) via UDAN expansion data and support-ticket funnel analysis; designed “First Flight Mode”; connected feature to downstream monetization (insurance upsell, repeat booking lift) — treated it as a business case, not just a UX improvement.

Swiggy — Fixing the Workplace Group Ordering Problem

[\[Case Study\]](#) *Feature-Gap / Trade-off Prioritization*

- Spotted product gap in same-building lunch delivery redundancy; designed “Swiggy Together” shared-cart with per-person UPI payment; made hard prioritization call (manual links before auto-detection) to validate demand first; mapped two-sided business impact: lower delivery cost per order, higher AOV, B2B coworking expansion path.

Product Work — Shipped Live

CogniFlow — AI UI Layout Optimizer

[\[Live\]](#) *React.js, Node.js, Google Gemini 2.5 Flash, HTML5 Canvas*

- Validated hypothesis (designers need faster visual hierarchy feedback) by surveying 8 design students; **built and shipped an LLM vision pipeline** (Multer → binary buffer → Gemini API → structured coordinate output); iterated output format twice based on feedback (text overlay → coordinate-mapped pin system). **North-star metric:** time-to-insight vs. manual peer review.

Grid-Lock — Real-Time EV Charging Station Platform [\[Live\]](#) *React.js, Node.js, MongoDB, Socket.io, JWT, Leaflet Maps*

- Validated via competitive analysis that no existing EV app addressed real-time slot availability or dynamic pricing; built, shipped, and iterated MVP — revised booking flow from **6 steps to 4** after usability testing with 6 peers. **Success metrics:** slot conversion rate and session-to-booking ratio.

SmartSpend India — Grocery Inflation Analytics

[\[Live\]](#) *Python, Pandas, NumPy, SQLite3, Plotly, Streamlit*

- Identified gap: no consumer tool translated MoSPI/RBI macro data into city-specific saving recommendations; shipped solo end-to-end to validate demand; tracked **200+ sessions** post-launch using Python/Streamlit analytics.

RetailPulse — Inventory & Revenue Intelligence SaaS

[\[Live\]](#) *React.js, Node.js, MongoDB Atlas, JWT, Redux Toolkit*

- Defined metric framework (stock turnover, waste %, demand forecast accuracy, profit margin per SKU) before building; translated feedback from 3 business owners into a prioritized roadmap addition (expiry-based waste alert).

Education

B.Tech — Computer Science & Engineering (IoT & Information Security), Manipal University Jaipur

2023 – 2027

CGPA: **7.9/10** · Coursework: DBMS, Software Engineering, OS, Computer Networks, DSA, Information Security Summer Valley School: XII **85.9%** | X **96.8%**

Certifications & Achievements

Product & Design: Build Wireframes & Low-Fidelity Prototypes (Google) · Figma Essentials (Udemy) · Business Analysis Fundamentals (Microsoft) · Foundations of Project Management (Google)

Agile & Data: Scrum Master Profession (IBM) · Data for Business Analysts — Excel (Microsoft) · Intro to Data Science (Cisco) · Dynamic Programming & Greedy Algorithms (Univ. of Colorado Boulder)

Hackathons: SmartHack — Club Randomise · IEEE HackEx
